

App Flow Document

Portfolio Website – Shib Chandan Mistry

1. Objective

Define how users (recruiters, engineers) navigate through the portfolio to:

- Quickly understand your profile
 - Explore projects
 - Dive into technical depth
 - Contact you
-

2. Primary User Flow (Recruiter Journey)

Step-by-Step Flow

1. Landing on Homepage
 2. Scanning Hero Section (3–5 seconds)
 3. Scrolling to Projects
 4. Clicking 1–2 projects
 5. Viewing details (modal/page)
 6. Checking skills
 7. Visiting GitHub or contacting
-

3. High-Level Navigation Flow

Landing Page

Hero Section

Projects Section

Project Detail (Modal/Page)

Skills Section

Contact Section

4. Detailed Screen Flow

4.1 Landing Page

Entry Point:

- Direct URL (recruiter link)
- GitHub profile
- Resume link

Actions:

- Scroll down
 - Click "View Projects"
 - Click Resume
-

4.2 Hero Section Flow

User Actions:

- Read name + role
- Evaluate credibility

Exit Paths:

- Scroll down → Projects
 - Click CTA → Projects
-

4.3 Projects Section Flow (Core Interaction)

Grid View:

- User scans project cards quickly

Decision Point:

- “Is this interesting?”

Actions:

- Click project → Open detail view
 - Click GitHub → External navigation
 - Click Demo → Video / demo
-

4.4 Project Detail Flow

Trigger:

Click on project card

Opens:

- Modal OR separate page

User Journey Inside:

1. Read simplified description
2. Understand problem
3. Skim features
4. Check tech stack
5. Optional deep dive

Exit:

- Close modal
 - Go to another project
-

4.5 Skills Section Flow

Purpose:

Validate your technical breadth

User Behavior:

- Quick scan (5–10 seconds)
-

4.6 Contact Section Flow**Actions:**

- Click GitHub
 - Click LinkedIn
 - Copy email
-

5. Interaction Flow Diagram

User Lands

Reads Hero (3 sec)

Scrolls

Sees Projects

Clicks Project

Opens Modal

Reads Details

Clicks GitHub/Demo

Returns

Checks Skills

Goes to Contact

6. Alternate Flows

6.1 Fast Recruiter Flow

Hero → Projects → GitHub → Exit

6.2 Technical Interviewer Flow

Hero → Projects → Deep Dive → GitHub → Multiple projects

6.3 Mobile Flow

- Scroll-based navigation
 - Single-column project view
 - Tap → modal
-

7. UX Optimization Points

Critical Enhancements

- Projects visible within first scroll
 - Clear CTA buttons
 - No unnecessary navigation layers
 - Instant modal loading
-

8. State Flow (Technical)

States:

- Default (homepage)
 - Project modal open
 - External redirect (GitHub/demo)
-

9. Navigation Rules

- Single-page scroll-based navigation
 - Anchor links (smooth scroll)
 - No complex routing initially
-

10. Conversion Points

Where user takes action:

- View Projects (primary)
 - Open Project Modal (engagement)
 - Click GitHub (validation)
 - Contact (final conversion)
-

11. Performance Flow Considerations

- Lazy load project images
 - Preload modal content
 - Avoid blocking animations
-

12. Final Insight

The app flow must:

- Minimize thinking
- Maximize clarity

- Guide user naturally to projects

The entire experience should feel like:

👉 “Scan → Interest → Proof → Contact”
